

1. Create Image Manipulation using cutting tools.

Aim:

To create Image Manipulation using cutting tools.

Algorithm:

Step 1: Open adobe photoshop software

Step 2: Open any two images by selecting File Menu → Open any two pictures.

Step 3: Adjust the size of two images within the screen.

Step 4: Select Marquee tool from the tool box and go to the top screen and change the feather as 50px.

Step 5: Using marquee tool select the part of an image and cut it using Ctrl + X.

Step 6: Again using marquee tool select a part of an image.

Step 7: Then using direction tool move the selected part of image 2 towards image 1.

Result:

Thus the Image is manipulated using cutting tool.

2. Convert Black and White Image into color Image.

Aim:

To convert black and white image into color image.

Algorithm:

Step 1: Open the Adobe photoshop software.

Step 2: Select file menu then click open, to open a black and white image.

Step 3: Select the magic wand tool from the tool box.

Step 4: Then using the magic wand, select any part of the image.

Step 5: Using Gradient fill the selected part can be coloured

(OR)

Step 6: Select Image Menu from the menubar then select Adjustment and Hue/saturation.

Image → Adjustment → Hue / Saturation

Step 7: The color box will get opened then tick colorize box and select any color, then adjust hue, Saturation, brightness indicator then press

Step 8: The given color will be applied to the selected part of an image.

Result:

Thus the black and white image is converted into color image.
